Photosynthesis

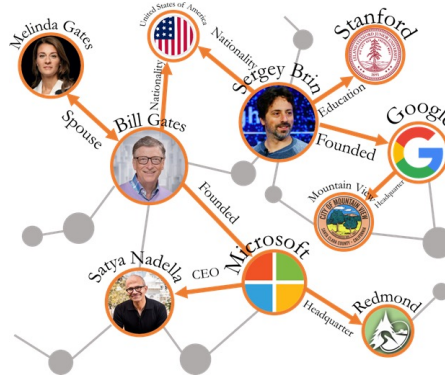

From Wikipedia, the free encyclopedia

Photosynthesis is a process used by plants and other organisms to *convert light energy* into *chemical energy* that can be released to fuel the organism's metabolic activities. This chemical energy is stored in *carbohydrate* from *carbon dioxide* and *water* – hence the name *photosynthesis*, from the Greek *phōs* (φῶς), "light". In most cases, *oxygen* is also released as a waste product. Most *plants*, *algae*, and *cyanobacteria* are *photoautotrophs*. Photosynthesis is largely responsible for producing and maintaining the oxygen content of the atmosphere, the energy necessary for life on Earth.^[k]

Although photosynthesis is performed differently by different species, the process always begins when *light energy* is captured by *reaction centres* that contain green *chlorophyll* pigments. In plants, these proteins are held inside *organelles* called *chloroplasts* in leaf cells, while in bacteria they are embedded in the *plasma membrane*. In these light-dependent reactions, electrons from suitable substances, such as water, producing oxygen gas. The hydrogen freed by the splitting of water is then transferred to various compounds that serve as short-term stores of energy, enabling its transfer to drive other reactions: the *reduction* of *dinucleotide phosphate* (NADPH) and *adenosine triphosphate* (ATP), the "energy currency" of cells.

Why do humans take O₂ to produce CO₂ while plants do the opposite?

Question Generation

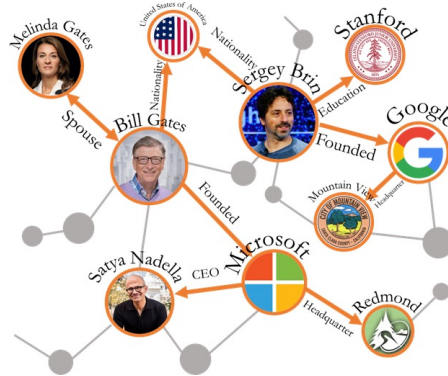

What can question generation be used for?

Texts

The image shows a screenshot of the Wikipedia article for 'Photosynthesis'. The article title is 'Photosynthesis' and it is described as 'From Wikipedia, the free encyclopedia'. The main text explains that photosynthesis is a process used by plants and other organisms to convert light energy into chemical energy, which is stored in carbohydrates. It mentions that this process involves carbon dioxide and water, and that oxygen is released as a waste product. The article also notes that photosynthesis is performed differently by different species, always beginning with reaction centres containing green chlorophyll pigments. In plants, these proteins are held inside organelles called chloroplasts, while in bacteria they are embedded in the plasma membrane. The article further describes the light-dependent reactions, where water is split into oxygen and hydrogen, and the hydrogen is used to reduce carbon dioxide into glucose. The energy for these reactions is provided by light, which is captured by the chlorophyll pigments. The article concludes by stating that photosynthesis is the primary source of energy for most life on Earth.

Why do humans take O₂ to produce CO₂ while plants do the opposite?

Produce new or original idea

how would you design a new..? what would happen if you...?

Justify a stand or decision

do you agree that...? what do you think about...?

Science & Technology

Is there a center of the universe?

545,587 views

Most of the astronomers, scientists, and philosophers had ideas about the universe that we now know were not entirely correct. **In what ways do you think ideas that have turned out to be “wrong” are valuable in developing our understanding of the universe?**

Why asking deep question is hard?

Ancient Greek believes that the earth is the center of the universe.

In 1543, Copernicus proposed that the sun was at the center of the universe.

They are all proved wrong.

Are those “wrong ideas” about the universe center also valuable?
If yes, why they are valuable?

Information-Seeking

Understanding, Reasoning

Most of the scientists, and philosophers had ideas about the universe that we now know were not entirely correct.

Failures are also valuable in scientific discovery.

Prior Knowledge

Reasoning with Semantic Graphs

Liangming Pan, Yuxi Xie, Yansong Feng, Tat-Seng Chua, Min-Yen Kan

Multi-hop Question Generation

Paragraph A: All Join Hands
"All Join Hands" is a song by the British rock band Slade, released in 1984 as the lead single from the band's twelfth studio album "Rogues Gallery".

Paragraph B: Slade
Slade are an English glam rock band from Wolverhampton. They rose to prominence during the early 1970s with 17 consecutive top 20 hits and six number ones on the UK Singles Chart.

Question:
When did the rock band that sang "All Join Hands" rise to prominence?

Answer: The early 1970s

- ❑ We choose **multi-hop questions**, a typical type of deep questions, to explore **reasoning in QG**.
- ❑ To generate a multi-hop question, it requires **the integration and reasoning over different pieces of information**.
- ❑ In contrast, **shallow QG** only requires local contexts and rarely involves reasoning.

(Yang et al., EMNLP 2018)

The Seq2Seq Baseline

- ❑ The key to multi-hop reasoning is to:
 - Understand the **relationship between entities**.
 - **Select reasoning chains** and perform multi-step reasoning.

Difficult when representing inputs as a sequence of tokens.

Semantic Graphs

How about we represent the documents in **a structured way**?

Paragraph A: All Join Hands

"All Join Hands" is a song by the British rock band Slade, released in 1984 as the lead single from the band's twelfth studio album "Rogues Gallery".

Paragraph B: Slade

Slade are an English glam rock band from Wolverhampton. They rose to prominence during the early 1970s with 17 consecutive top 20 hits and six number ones on the UK Singles Chart.

Semantic Graphs

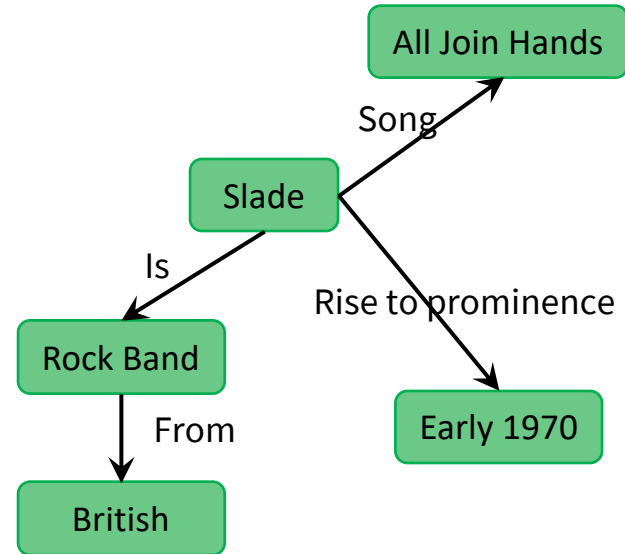

How about we represent the documents in a **structured way**?

Paragraph A: All Join Hands

"All Join Hands" is a song by the British rock band Slade, released in 1984 as the lead single from the band's twelfth studio album "Rogues Gallery".

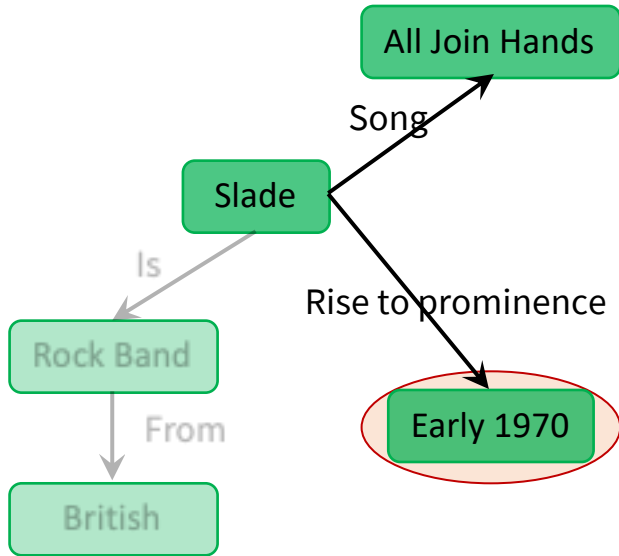

Paragraph B: Slade

Slade are an English glam rock band from Wolverhampton. They rose to prominence during the early 1970s with 17 consecutive top 20 hits and six number ones on the UK Singles Chart.

Semantic Graphs

- Different reasoning chains correspond to different questions.

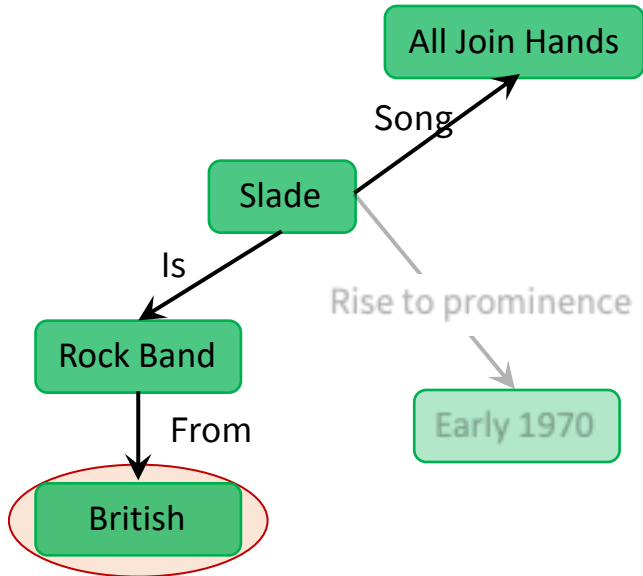

Question: When did the rock band that sang "All Join Hands" rise to prominence?

Answer: The early 1970s

Semantic Graphs

- Different reasoning chains correspond to different questions.

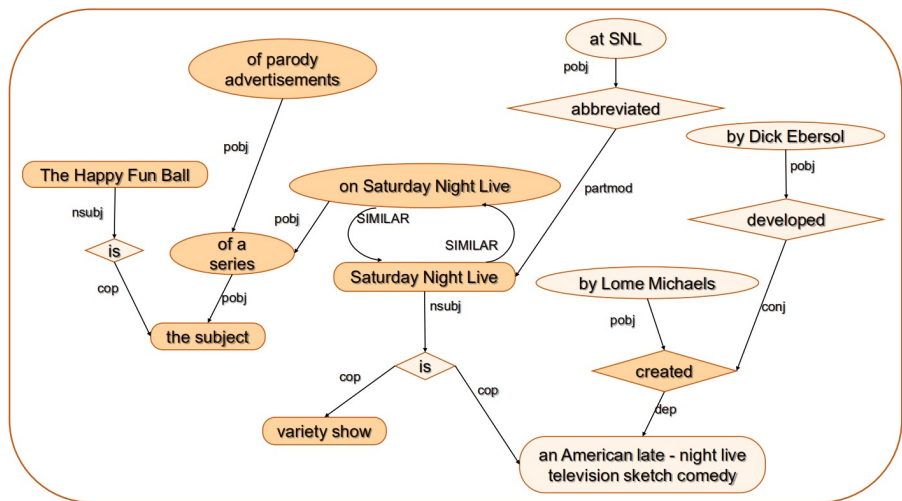

Question: Which country is the rock band that sang “All Join Hands” from?

Answer: Britain

Constructing Semantic Graphs

Question The "Happy Fun Ball" was the **subject** of a **series** of **parody** advertisements on a **show** **created** by who?

Answer Lorne Michaels

Evidence #1 The "Happy Fun Ball" was the **subject** of a **series** of **parody** advertisements on "Saturday Night Live" .

Evidence #2 Saturday Night Live (abbreviated as SNL) is an American late - night live television sketch comedy and variety **show** **created** by Lorne Michaels and developed by Dick Ebersol .

1) Semantic Parsing:

- Dependency Parsing (DP)
- Semantic Role Labeling (SRL)

2) Pruning and Merging

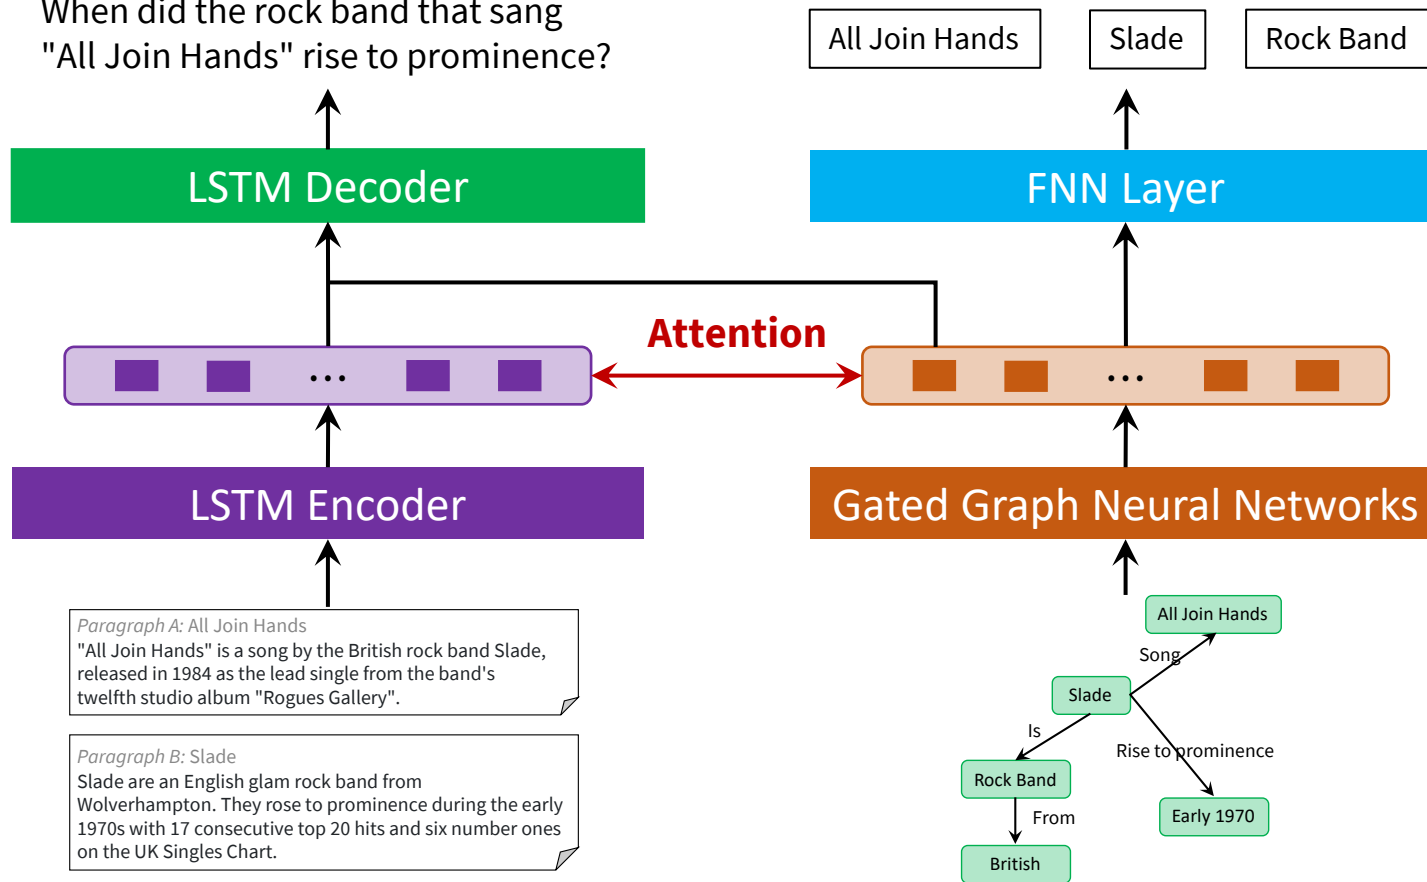

- Based on heuristic rules
- Merge tokens within a phrase as a single node
- Filter out unimportant nodes (for example, punctuation)

3) Connect Similar Nodes

- Merge semantic graphs for different sentences into a unified graph.

Model Architecture

When did the rock band that sang "All Join Hands" rise to prominence?

Human Evaluation

- 300 random test samples
- 3 human annotators
- Evaluation metrics: Fluency, Relevance, Complexity

Error Analysis

- ❑ **Semantic Error:** the question has logic or commonsense error;
- ❑ **Answer Revealing:** the question reveals the answer;
- ❑ **Ghost Entity:** the question refers to entities that do not occur in the document;
- ❑ **Redundant:** the question contains unnecessary repetition;
- ❑ **Unanswerable:** the question does not have the above errors but cannot be answered by the document.

Error Analysis

- ❑ **Semantic Error:** the question has logic or commonsense error;
- ❑ **Answer Revealing:** the question reveals the answer;
- ❑ **Ghost Entity:** the question refers to entities that do not occur in the document;
- ❑ **Redundant:** the question contains unnecessary repetition;
- ❑ **Unanswerable:** the question does not have the above errors but cannot be answered by the document.

Limitations

❑ Implicit Reasoning

- Lack of an **explicit modeling** of the reasoning process.
- For example: retrieve(A); retrieve(B); Compare(A, B)

❑ Supervised Learning

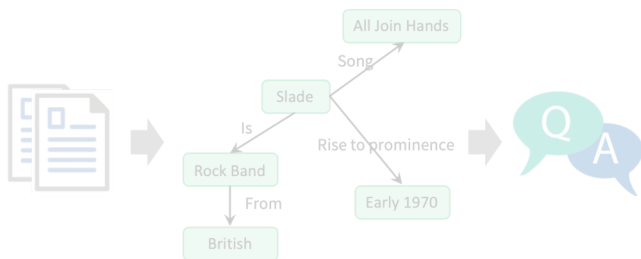

- Requires large-scale human-written multi-hop questions.
- In practice, **unsupervised question generation** is more desirable.

How can we generate multi-hop questions:
1) with an explicit reasoning process
2) without seeing any human-written examples?

Core Problems (My Interests)

How to **generate** questions that promote deep reasoning?

[Pan et al., ACL 2020]

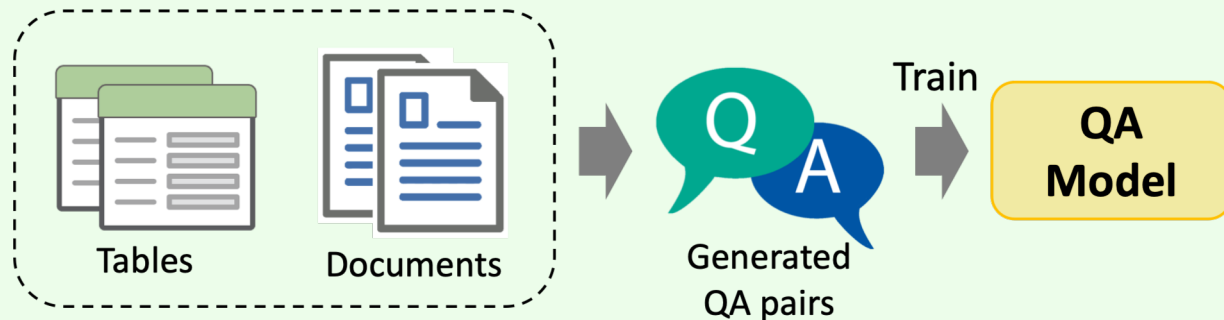

[Pan et al., NAACL 2021]

How does QG **benefits** downstream NLP applications?

[Pan et al., ACL 2021]

Composing shallow questions into deep questions

Liangming Pan, Wenhua Chen, Wenhan Xiong, Min-Yen Kan, William Yang Wang

Answer Multi-hop Questions

When did the rock band that sang "All Join Hands" rise to prominence?

Multi-hop Question

Which rock band sang "All Join Hands"?

Paragraph A: All Join Hands

"All Join Hands" is a song by the British rock band Slade, released in 1984 as the lead single from the band's twelfth studio album "Rogues Gallery".

Ans = Slade

When did **Slade** rise to prominence?

Paragraph B: Slade

Slade are an English glam rock band from Wolverhampton. They rose to prominence during the early 1970s with 17 consecutive top 20 hits and six number ones on the UK Singles Chart.

Ans = Early 1970s

Generate Multi-hop Questions

When did the rock band that sang "All Join Hands" rise to prominence?

Multi-hop Question

Which rock band sang "All Join Hands"?

Ans = Slade

When did **Slade** rise to prominence?
